Number 22

Glass Plant To Build Another Big Warehouse

Now Manufacturing Many New Lines of glass ware and Objective is to supply all Western Demands from the large Plant—Large Staff now Employed.

When Mr. J. W. King, general manager of the Dominion Glass Company, was here a few weeks ago he made the statement that it was the intention of his company to so equip the plant here, that it would be in a position to supply the demands of the west in all lines of the glass trade. The development which has taken place here recently would indicate that the company is on a fair way towards putting Mr. King's prophesy into effect.

During the past few months several new machines have been added to the plant here and at the present time this branch is in a position to manufacture several lines of ware in addition to what they have been making in the past.

Because of this recent development the staff has been increased in almost every department and now the number of employees is said to be greater than ever, before since the factory was started here.

Another sign of development is the fact that a contract has been let for the erection of another warehouse in addition to the three large ones already in use. This new warehouse is to be the largest yet, measuring 110 X 175 feet. It will be constructed of galvanized iron similar to the ones already in use. Workmen have already started on the erection of this building and J. DeWitt has the contract for same.

This plant is now working 24 hours a day and has the equipment for making all kinds of glass ware from the smallest prescription bottles, ink bottles etc. to the largest kind of glass containers.

Even now the plant in Redcliff is in a position to supply the needs of the west in almost every line of glass ware, and the local management is to be congratulated in using their influence to absorb town men in filling up vacancies on their increasing staff.

PLAY THE GAME FAIR

A word of advice to soccer players from the League President.

Play the game hard, but play fair

Play the game, yes, to win;

Play the game hard but play fair

And if you are beaten, grin.

Go shake hand with the winning team.

Tell them the best team won;

Tell them you say just what you mean;

"You're playing the game for fun."

Play the game but play it fair.

If you're tempted to cheat a bit

Just remember I may put your team in the air.

A foul never makes a hit.

You each may be beaten or even

have ties.

But there's nothing under the sun.

Will warrant you cheating to win

a prize.

It's just playing fair that's fun.

MR. FRANK A. ROLPH
President of the Imperial Bank of Canada, succeeding the late Peleg Howland.

Bennett Now Has A Majority of 33

Over Combined Forces of All Other Parties.

There has been very little change in the standing of the parties since last issue. What changes there were in favor of the Conservatives giving them one more of a total majority in the House.

The latest summary gives the standing as follows:

Conservatives	139
Liberals	86
United Farmers	10
Progressives	2
Liberal-Progressives	3
Labor	3
Independents	2

Total 245

The gain was made in Quebec where the Conservatives in conceded elected by one of a majority.

The standing now gives Conservatives a majority of 33 over all parties.

The football game billed for last Tuesday evening between Redcliff Town and the Legion did not materialize as the Legion could not field a team.

Is your Subscription paid?

Bricks Win From The Town Team

One-Nothing Score in the League Series.

The Brick & Coals continued their winning streak again last Thursday evening by defeating the Town team 1 goal to 0 in a league fixture. The game was a good one all the way and until near the finish it looked as though it would end like several other games between these two teams—a draw. However just a few minutes before the whistle Foy made a nice rush for the Bricks and passed nicely for the goal. In his anxiety to save Gibson of the Town team headed the ball but missed cue and landed the ball in his own net.

The game was clean and snappy throughout and much enjoyed by the fans.

Swimming Gala At Medicine Hat

Invitation Extended to Redcliff to Take Part.

A Swimming gala is being put on at the South Side swimming pool in Medicine Hat on Wednesday, August 20th. A good program of swimming and diving events for men and women, boys and girls, has been prepared for which excellent prizes are assured. Entries must be in the hands of W. H. Williams, director of the gala, by Aug. 19 and an invitation has been extended to patrons of the Redcliff pool to take part.

The program commences at 7:30. Admission: Adults, 25c; Children 10c.

HARVESTING STARTED IN THIS DISTRICT

Wheat cutting started in this district on Tuesday. Several farmers of the district are not well into their crops. N. Dacre has been cutting all week. Although his yield is not big the grain is turning out a very good sample.

Redcliff Pupils Make Good Showing at Hat

All Make Passes at Departmental Exams.

Redcliff pupils who attended Medicine Hat high school term made an exceptionally good showing in the recent departmental examinations. Evelyn Hick passed in all her seven units. This completes her grade XI and 2 subjects in grade XII. Nona Rose completed her grade XI and part of XII. Francis Buchholz passed in all her subjects completing her grade XII. Nancy Martin passed in all the subjects on which she wrote, completing her grade XI. Billy Sellhorn made a full pass in all grade XI subjects and also some subjects in grade XII.

All these pupils made good marks. The Review extends congratulations.

GRAIN PRICES ARE NOW ADVANCING

During the past week wheat prices have advanced about 12 cents. Growth throughout the corn belts of U.S. and east in some parts of the Canadian prairie are given as the causes of the rapid advance.

Wheat, whose value had ebbed in recent months until it sat a week ago at 83.3 cents a bushel, the lowest in 16 years started up 5 to 6 1-8 cents from Tuesday's close and was 12 cents above the record low.

Wheat and corn both edged up above the dollar mark. September wheat finished the day at 96 5-8 to 7-8 cents; December at \$1.02 1-2 to 7-8; March, \$1.07 1-2 to \$1.08, and May \$1.10 to 3-8.

Brick & Coal Play Lethbridge Saturday

The Brick & Coal play Lethbridge in Medicine Hat on Saturday evening of this week in the next round of the Bennett shield games.

The game is billed to commence sharp at 6 o'clock.

SIR JAMES WOODS
continuing as Vice-President of the Imperial Bank of Canada.

Former Redcliff Man Has Fine Greenhouse

W. J. Manfield Praised for his work at Lloydminster.

Mr. W. J. Manfield, formerly manager of the Dominion Greenhouse here, is making quite a name for himself in Lloydminster where he is now proprietor of a large greenhouse in that town. Last week Lloydminster held its annual fair and Mr. Manfield's greenhouse was greatly admired by visitors to the fair. Describing Mr. Manfield's lay out the Lloydminster Times has the following to say:

The grounds are already laid-out with gravelled and pretty borders of lobelia, sweet alyssum, phlox and pansies. There are a great variety of flowering plants, roses, perennials, biennial and annuals; pretty window boxes, and a nice display of house plants and flowers in the conservatories, besides hothouse tomatoes and cucumbers.

The florist will be pleased to answer any questions regarding the growth of plants, the use of fertilizers and insecticides for destruction of pests, and will give or procure for visitors any advice or information they may require concerning garden house plants or shrubs.

Mr. Manfield will be pleased to gather information himself regarding the tastes of the people of this district, concerning plants shrubs and flowers. It is a well known fact amongst florists of the West that the tastes of people differ in the different settlements, therefore it behooves the florist to study the tastes and requirements of the people of his district.

Mr. Manfield is a florist of wide experience and many years. He has studied horticulture in England, France and Germany, and has been in the horticulture business in western Canada for the past 20 years.

The Lloydminster greenhouse have, we believe, contributed largely to the development of horticulture in Lloydminster in past years, and the desire of the new florist is that it may continue to do so.

It is anticipated that there will be any delay in holding bye-elections for the endorsement of newly appointed ministers as, coming so soon after a general election which was so decisive, it is hoped all ministers will be returned by acclamation.

New Premier Likely Be Sworn In Office Today

Not Likely be any Bye-Elections — Special Session Probably Sept. 2nd. After which the Imperial Conference.

Latest reports from Ottawa are to the effect that Hon. R. B. Bennett, Canada's new Premier will be called upon some time today to announce his cabinet, present them at Rideau Hall and have them sworn in before the Governor General.

Rt. Hon. McKenzie King, the retiring Premier, had a meeting of his old cabinet yesterday, after which he announced to the Governor General that he was prepared to tender his resignation and recommended that Mr. Bennett be called upon to form the next government, just as soon as Mr. Bennett was prepared to assume that responsibility. In the mean time Mr. Bennett has been busy arranging his cabinet and indications are that he has everything in readiness.

Beyond a few of the outstanding leaders of the party there is considerable speculation as to just whom will fill the different portfolios but there is no doubt that Mr. Bennett has enough time to form a cabinet and this, no doubt, is the cause of so much speculation.

Immediately after the government is formed and sworn in the next question will be the calling of a special session as promised by the new Premier. This is announced to take place early in September, probably the 2nd. The main business for which this session is called will be rushed through as quickly as possible in order to give the new government an opportunity to select its representatives to attend the Imperial Conference.

In the mean time it is not an

Everybody welcome. A special invitation is extended to those who have no church home or do not attend any Sunday School.

CHAMPION MERMAIDS IN ROCKIES

Champion lady swimmers and divers of the United States invaded Banff and Lake Louise this month and gave thrilling exhibitions in the pools attached to the Canadian Pacific hotels at both resorts. Hundreds of guests at both hotels witnessed the show where skill and scenes of super natural beauty make a remarkable combination. Illustration shows the team with a background of Lake Louise and mountains. They are, from left to right, Agnes Geraghty, Olympic swimmer; Catherine Adams, Lake Louise metropolitan distance champion and Olympic swimmer; Elizabeth Hanf, national champion of the United States; Helen, national champion of the United States; 100 and 200 yards, back stroker; and Georgia Coleman, national champion diver, who is also listed. All are from New York, except Miss Coleman, who is from Los Angeles.

White Bread Is Endorsed

In a Wholesome Nutritious Food, Say U.S. Experts

Hard on the heels of the statement made by E. W. Beatty, president of the Canadian Pacific Railway, that the greatest help the United States could give Canada would be to consume all of the wheat it raises, comes the report of the United States Department of Agriculture that white bread is a wholesome nutritious food and should be eaten as part of a balanced diet.

During the past five years the United States Department of Agriculture has found that there has been a growth in the United States a distinct fear of white bread, a sentiment created largely by propaganda of wheat substitutes. So the amount of white bread consumed has been gradually diminishing.

But five nationally known authorities on dietetics announced that white and whole wheat bread should be eaten as part of a balanced diet. Economists and farmers looking to the business side of the picture, see no disaster facing wheat growers if anti-white bread propaganda have their way. The diminishing demand for white bread spells further demoralization of the American wheat farmer.

The American people today consume three bushels of wheat for every four raised in the United States. It is this extra bushel that must be sold abroad that is causing all the trouble. If this extra bushel could be consumed in the United States, the world problem would clear up rapidly and Americans would be much better off.

What is white bread good? The leaders who say "Yes" are Dr. R. Adams Dutcher, Pennsylvania State College; Dr. E. V. McCullum, Johns Hopkins University; Dr. Lafayette B. Mendel, Yale University; Dr. H. C. Sherman, Columbia University of Wisconsin.

The United States government officials, too, led by Dr. A. F. Woods, director of scientific work, agree with these bread authorities. "White bread is good," says the government. Ultimately the United States will consume all the wheat that it raises. But now is the time to help the farmer solve the wheat problem. For it is a big one, and still unsolved.

Desert Canyon Flowers

Salt Sals In Expansive in Texture and Tinting

Within the canyons of the desert mountains are found species of animals, which, because they must have a greater share of moisture, do not venture out on the level desert wastes. Of these are the Nature Magazine, the desert salt sals is easily the queen. Of the blazing scar family, they uphold the tradition of that group for distinctive form and attractive qualities. Its satiny flowers are not equalled in all the desert flora in exquisite texture and color. In the Painted Canyon and other gorges in the mountains north of Mexico, California, are its favorite dwelling places.

An Energetic Outcast

That breezy Irishman Sir Thomas Lipton became an outcast on the other day, and, while so many of his generation are preparing to bid farewell to mundane affairs at that stage, his boundless energy is being concentrated on another game attempt to lift the America Cup with Shamrock V. King Edward, who always had a discerning eye for the goods, had a great regard for him and honored him with his friendship for many years.

One of New York's power stations consumes a train load of coal every day—about 30 car loads.

If they just keep on trying, they'll turn a breakfast food that is absolutely tasteless.

Every child person in Copenhagen, the capital of Denmark, rides a bicycle.

A DIAMOND OF PARSION
"Ah, you've just come at the right moment. I've just killed my wife and I haven't the courage to commit suicide."—Montague, Charlier.

W. N. U. 1314

Rapid Changes On Farm

Industry Has Been Revolutionized By Use Of Electrical Appliances

According to the Detroit News, an electric thrill is quickening agriculture. There are 150,000 miles of electric lines now in service furnishing current for farm uses. These rural electrification schemes are rapidly adding to the rural growth during the past eight years in the United States to the total number of buyers of current at the end of the first quarter of 1934 the history of the electric light and power industry in this country.

This rural boom for more "juice" has found that there has been more jobs in the cities. The introduction of electricity at first means only better lights. But with the new light turned on, all sorts of desirable helpers begin to offer themselves.

There are few processes on the farm that can not be quickened by the use of electricity. In Sweden, where rural electrification has reached remarkable development, flows are drawn across the fields by portable motor irons taking their current from trolleys.

But the greatest use of electricity on the farm is a corn boy. A pump water, turns the feed grain into meal, and at the same time, it hauls chaise and prepares their feed. The milk and cream are pumped and the milk and cream are pumped.

The demand prompted by these rural uses, which are for machines and more machines. The peasant could get a thrill out of such contemplation.

Editors Are Human

No More Anxious Than Average Citizens To Stop Up Trouble

When a doubtful situation arises in a town, it is quite the fashion to say that "the paper ought to say something about it." The average citizen feels quite certain that the newspaper should run a newspaper better than the editors, and if he were publisher of that sheet he'd show him, you bet. As a matter of fact, if he has been some, he is just as the editor does—not the soft peddler on family row, church square, scandals nor in violating principles, and such matters of minor importance as will adjust themselves with the passing of time. The newspaper critic ought not to expect a newspaper to advance or attack any proposition which he himself hasn't the courage to support or assail over his own signature.

Editor is writing—ever eager—to push any proposition to the public. If he is not willing to pull chestnuts out of the fire for individuals or for minorities.

When the Bolshevik Scored

No Count-Back Few Either Doctor Or Architect

We all must agree that when it comes to the question of occupation or profession, the character of the job should be of far greater importance than consideration of priority.

A doctor, an architect and a Bolshevik were discussing the priority of their occupations.

The doctor said: "When Adam's side was opened and a rib removed to make woman there was a surgical operation—medicine was the oldest profession."

The architect said: "Yes, but when the earth was made out of chaos, there was the building process, the use of materials according to plan. The architect is therefore the oldest."

The Bolshevik smiled and said: "But who supplied the chaos?"

As She Understood It

Little Mary was on a visit to her grandfather and the old-fashioned grandfather clock in the hall was a source of wonderment to her.

"Any use to you still there, Jack?" "Any" came the faint response. "It's no use, ma'am; they're 'killing' it for the rope."

Price Too High

A foot climbing the Alps had fallen into a deep crevasse.

"Bide a wee better, Jack! I'll soon have ye out o' that," called his companion. "I'm awn' to buy ye a pair o' shoes."

Two hours later he returned. "Any use to you still there, Jack?" "Any" came the faint response. "It's no use, ma'am; they're 'killing' it for the rope."

According to a recent analysis the average bank in Japan has deposits of \$100,000.

For one invention alone—a new electric light—there have been notes extending to 40,000 pages.

Price Of A Clean Farm

Efficient Vigilance Necessary In Order To Control Weed Menace

Things are never so bad but what they might be worse, and while in the case of the weed problem in some farms, this might be a matter for doubt, it is nevertheless true that there is always a weed in the room for a few more if they are allowed to go unchecked.

Aside from the common ordinary routines of rotation, hoeing, another crop and so forth, there are a few factors which are somewhat neglected in common control practice and which are of prime importance to the individual as means of control. In the first place a keen weather eye should be kept for new types. All of our common weeds were introduced at some time or other, and at some time or other in their career on any one farm they might be attacked with comparative ease. A new weed in one case out of ten gets its first start in a community or farm because there is only a small amount of it, and since it is an unknown quantity, it is easily ignored.

Another case of the same point is the checking up on the possible sources of new weeds. The sowing machine has been pretty thoroughly tried and at any rate it is too late now to do anything about it. It is too late now to make resolutions for this fall and next year, but there is another source of weed seeds which can still be checked up on and that is the threshing machine. The grain separator has been a serious offender in many years, and it is denied, and everybody should be a little more careful. The grain separator has been a serious offender in many years, and it is denied, and everybody should be a little more careful.

However, the threshing machine is not the only one to blame in connection with the threshing factor of weed seed distribution and it is probably a good deal more innocent than the man who cheerfully shovels all the refuse from the machine out the back barn door into the hayrack. There is no excuse for that sort of treatment of the screenings from the machine. A good non-fire immediately the machine has left and the small amount of chicken-feed which is lost will be amply made up for in weed reduction.

There are many points involved in the business of weed control and the smaller ones outlined above are quite as important as those which involve a great deal more labor and sweat. Effortful vigilance is the price of a clean farm.

Hard To Double

Is a person who attempted suicide obliged to pay the doctor who recommended him against his will, for medical services rendered? That is the question which has been occupying the minds of Berlin lawyers since the refusal of Walter Blohm to come across after his wife brought back to this life of tears.

Borrower—"I hope you got my check?"

Creditor—"Yes, twice—once from you and once from the bank."

The West Indies is becoming a popular winter resort for Europeans.

Proud to be "Returning Canadian"

Is a person who attempted suicide obliged to pay the doctor who recommended him against his will, for medical services rendered? That is the question which has been occupying the minds of Berlin lawyers since the refusal of Walter Blohm to come across after his wife brought back to this life of tears.

Borrower—"I hope you got my check?"

Creditor—"Yes, twice—once from you and once from the bank."

The West Indies is becoming a popular winter resort for Europeans.

No Wealth But Life

Study Of Matters Pertaining To Good Health Is Of Paramount Importance

Around the great exhibit of the Department of Health, Great Britain at the famous Wembley Exhibition of 1934, one read the words "There is no wealth but life." The meaning was well illustrated by the many marvelous inventions which were devised by the skill of man to preserve this wealth that the race might be rich.

Unfortunately it does not always follow that health is purchasable, else a millionaire would be the possessor of that strength of body and mind which the rich often find so elusive. Like the rain which falls upon the just and the unjust, the divine laws which govern the quality of health a man enjoys, are as impartial as the sunshine.

One of the commonest of tragedies in the case of a man and his health is the fact that he has somehow eluded the grasp of the bad habits, and yet he has failed to possess mind and in patience, and the result is sleepless nights and restless days. Or again, there is the irony of being able to provide in abundance the things of the table, and yet to lack the one thing needful—a good digestion.

Part of the poet's program of the Canadian Red Cross is to make a study of health conditions and by various means to induce the study of healthy living among the people. That health can be published from the house is now an accomplished feat, for a large number of the families weekly for a special "Health Hour" which the Alberta Red Cross broadcasts over C.B.C., the Edmonton Journal. A considerable correspondence comes and the following of these letters reveals the fact that there is a keen desire on the part of young married people to understand at first hand the profound mysteries of birth and parenthood. "Child welfare is indeed a fitting subject for a special feature in a world time Red Cross program of improvement of health, mitigation of suffering, and prevention of disease."

Rayon and Real Silk

Shopper Can Tell Difference By Few Easy Tests

It is obviously important to be able to distinguish between rayon and silk. A few easy tests, made with samples, will give the shopper the knowledge. Rayon is more lustrous than silk and looks even more silky than silk itself. It is more susceptible to a small flame, while rayon burns with a flash. Wet silk threads are as strong as dry silk, but rayon threads are weak, and the fibres can be pulled apart like the fibres in a wet blotter.

Rayon threads split very easily. If the end of a piece of rayon is pulled apart, the threads will come apart without difficulty. Silk threads do not split so easily.

The West Indies is becoming a popular winter resort for Europeans.

As Old As Aeronautics

Early Experiments With Parachute While Trails Were Not Without Honor

Unquestionably the parachute, nearly in its present shape, is as old as aeronautics. There is supposed to be a record of one in Venice from 1377, and there is a narrative of a French ambassador to Spain in the 17th century to the effect that a mountaineer at the royal court climbed to the top of a tall bamboo and jumped off with two umbrellas to support him. Very likely this is true.

Shortly after the Montgolfier brothers, the French aeronaut Blanchard seems to have made the first parachute experiment in connection with a balloon, but instead of trusting himself to the apparatus he attached his dog.

Possibly because the parachute had been designed for the weight of a man and was thus much too large for the dog, instead of dropping when released, it went up considerably higher than the balloon, then at about 6,500 feet it came back down near the balloon and the dog had a chance to grab a greeting to Blanchard. At least, that's the story that was told. Finally Blanchard reached the ground by the gradual descent of the balloon and a little later the dog landed unhurt.

This successful experiment doubtless greatly stimulated the inventors for presently various forms of parachutes were suggested, some of which were actually used in the field. One of the first to be used in the field was the parachute used by the Frenchman Garnier who staged a performance in Paris, in 1882. Garnier cut himself loose at 1,200 feet and luckily managed to land safe and sound.

One Of The Indispensables

Nothing Will Take The Place Of A Newspaper

We never miss the water till the well runs dry and the same applies to the daily newspaper. A valuable object lesson was given to readers in England on Good Friday this year.

Good Friday and the day after Christmas are two days in the year when no newspapers are published in England. On Good Friday the weather was very inclement in the old country, and the day after Christmas was very inclement in the new home by our own fireplaces were glad to be there. Something, however, was missing. The setting and comfort were not complete. There were no daily newspapers to read.

Although nearly everyone has a newspaper, it did not fill the bill. It was not the newspaper that was missing, but the newspaper that was missing. It was not the newspaper that was missing, but the newspaper that was missing.

Next morning's papers carried the news items of interest and showed gratifyingly that there was a newspaper. We must admit that the daily paper is indispensable. Being with it the daily sheet for only one week-day is convincing enough.

An Unexpected Answer

The philanthropic lady was visiting a school. To test the brightness of a group of rather poor pupils she questioned:

"Children, which is the greatest of all virtues?"

No one answered.

"Think a little, what is it I am doing when I give up time and pleasure to come and talk with you for your own good?"

A grimy fat went up. "Well, what am I doing, little boy?"

"Please, ma'am, buttin' in" was the reply.

Could Do Better

A little boy had got into the habit of saying "dam," of which his mother naturally did not approve.

"Dear," she said to the boy, "there is danger; it is yours if you keep on saying 'dam' again."

"All right, mother," he said, as he took the money. "I promise."

As he was lovingly fingering the money, a hospital look came into his eyes, and he said:

"May, mother, I know a word that's worth a shilling."

World's Largest Wire Rope

What is believed to be the largest wire rope in the world is to be used at a dockyard in Hong Kong for hauling huge vessels up the slipways. The rope consists of six wires, the first four weigh 30 tons and have a breaking strain of 800 tons.

Graveyard Of The Atlantic

Nova Scotia Coast Has Always Figured In The News Regarding Shipwrecks

Ships. That "graveyard of the Atlantic," off the Nova Scotia coast, has always figured in the news. The last pack of the Halifax Chronicle from an old newspaper file of June, 1826, tells how the British government granted an allowance of 400 pounds for the support of the lighthouse on the island, provided a similar sum was contributed by the legislature of Nova Scotia. The grant was regarded "as a far instance, if indeed any were wanted, of that liberality which distinguished the gifts of our maternal government."

The writer felt that Canada (now Ontario and Quebec), and New Brunswick should contribute to the upkeep of the lighthouse. The item read as follows: "The last pack of the Halifax Chronicle from an old newspaper file of June, 1826, tells how the British government granted an allowance of 400 pounds for the support of the lighthouse on the island, provided a similar sum was contributed by the legislature of Nova Scotia. The grant was regarded 'as a far instance, if indeed any were wanted, of that liberality which distinguished the gifts of our maternal government.'"

Was Used Centuries Ago

Germany and Italy Used Outlines Long Before France

Who invented the guillotine is to be troubling the French since there has been agitation for the discontinuance of beheading by machine.

Dr. Joseph Guillemin, an authority on anatomy, member of the assembly during the revolution, decried the "equality before the executioner" and the guillotine was adopted. It was not the doctrine proposed, but because he suggested a standard form of execution and because of the similarity of names, the guillotine has been suggested by most people to have been the doctor's invention.

Old engravings left by the Baroness de Rothschild, however, show such a same machine was used centuries ago. The German Emperor drew a picture of a machine quite like the modern instrument, and the man, drawing a story of Roman days, showed a similar device in which a heavy sword, falling in a groove, did the beheading.

Filling Large Order

Lumber mills in Vancouver are working night and day on the production of 400,000 giant red cedar shingles to cover the Les Loges Hotel at St. Lawrence-Quebec.

The new Les Loges Hotel, owned by the Les Loges-Quebec Community Association, Limited, was built by the Les Loges-Quebec Community Association, Limited, Montreal, is said to be the largest single purchase of hand split shingles in the history of the lumber industry.

Wallpaper is said to date back to the year 1461.

Lloyd George's father was once a tin peddler.

"You've ordered two new dresses. Don't you know that I am broke?" "Course I do, but the dressmaker doesn't."—Walter Jakob, Berlin.

WORLD HAPPENINGS BRIEFLY TOLD

On June 24, the King and Queen received the delegates to the Imperial Press Conference, in the throne room at Buckingham Palace.

British Columbia expects to benefit from the new Australian tariff just introduced in the Commonwealth House, extending a British preference to lumber.

Mr. Bennett Scott, the song composer whose "Take me back to dear old Blighty" was sung by soldiers all over the world, died at his home at Laramie, Minnesota, London, England.

Mr. and Mrs. Joe V. Desnoes, of Detroit, were burned to death when their airplane fell at the municipal airport, in Toledo, Ohio, and burst into flames.

President Hoover has approved transfer of the obsolete submarine P-13 from the navy to the U.S. shipping board which will charter the craft to Sir Hubert Wilkins for North Pole explorations.

F. E. Beattie, aged 50, an accountant in the Bank of Hong Kong and Shanghai, at Shanghai, disappeared from the "Empress of Russia." It was reported on the steamer's arrival at Vancouver. He was a passenger en route to Scotland.

Vincent Massey, retiring Canadian minister to the United States, who delivered the annual commencement address at the University of Michigan, Ann Arbor, was awarded an honorary degree of Doctor of Laws.

L. R. McGregor, "new Australian trade commissioner to Canada, arrived at Victoria recently from Sydney with his wife and two children. He is particularly anxious to introduce Australian wines to Canada.

Switzerland Is Prosperous

Has Population Of Over 4,000,000 And People Are Good Workers

Switzerland, which has an area of only 15,850 square miles, has now a population of roughly 4,000,000, to which it has risen from 3,000,000 in 1900. Small as the country is, it has 20 towns of over 10,000 people. While the population has increased, the mountainous regions are being deserted. The general growth of Switzerland is the more remarkable for the fact that one-fifth of the whole territory is mountainous and unproductive. Switzerland is almost destitute of native raw materials and yet she has 600,000 persons engaged in productive industry. In fact, it is not too much to say that if all the world worked as well and as effectively as Switzerland, it would be a happier place. Switzerland is never troubled by war or rumors of war.

Canada's Military Force

Consists Of 401 Officers and 3,067 Non-Commissioned Officers

Canada's permanent military force at the present time comprises 3,463 all ranks of whom 401 are officers and 3,067 non-commissioned officers. At headquarters of the army there are nine naval officers, forty-nine military officers and thirty-one air officers. There are also at headquarters a total of 194 other ranks.

Four hundred and forty-three civilians are employed of whom 400 are permanent.

The cost of administering the headquarters totals \$1,425,311 annually.

Exhibit For Poultry Congress

A consignment of specially selected live poultry amounting to eighty-five birds, inspected and passed by Professor Wood, of Winnipeg, has been sent to Ottawa, where it will be linked up with the Canadian consignment of a thousand birds for the world's poultry congress. These birds include some of the choicest specimens of poultry to be found in the whole Dominion.

HOW THE RICH FARMER EQUIPPED HIMSELF AS A PROTECTION FORM MOTOR-ACCIDENTS IN THE CITY—Lustig fashions, Leipzig.

W. N. U. 1844

Many Accidents Caused By Neglected Cars

Carelessness Allows Defects To Develop In Mechanical Parts

Automobile owners in the United States who neglected to keep their cars in good condition were responsible for five thousand of the lives lost in traffic accidents during the last calendar year. This estimate is made by the framers of the report recently submitted to the National Conference on Street and Highway Safety at Washington, by its committee on the maintenance of motor vehicles. To learn that fully fifteen per cent of the traffic fatalities recorded in 1929 are actually traceable to lack of proper care of cars is an enlightening disclosure. The studies of the committee into causes of motor accidents have convinced its members that stricter official inspection of all automobiles is urgently needed.

Especially this report charges that because of improper maintenance defects in the mechanical parts of a car, brakes add steering gear are allowed to become dangerously worn or drop out of adjustment; horns, windshield wipers, rear lights and headlights uncared for become ineffective. A steady increase in driving speed in the last five years has served only to increase the hazards created by the negligence in driving. It is urged that the law be so amended that they are to be driven on public highways. The committee recommends legislation that will enforce periodic inspection in States where such a precaution is not now taken. It suggests that in the case of old cars that have been repossessed several times a certificate of inspection should be required when drivers' licenses are issued.

Pulsating Stars

Theory Advanced That Certain Stars Do Not Rotate

A theory that certain stars do not rotate, is presented to the American Association for the Advancement of Science, by Dr. Ross Gunn, of the Naval Research Laboratory. These non-rotating stars are those which pulsate, that is, which expand and contract. Some of the pulsating stars have the habit of pulsating in the last few minutes of their lives. They beat like vast millinery mills.

One class of pulsating stars, the Cepheid variables, are the "light-houses" of the sky, that is, they enable astronomers to calculate the vast distances of space. Dr. Gunn's theory comes from study of magnetic fields of stars, especially those about the pulsating stars.

Working For Grain Show

C. W. Bennett, secretary of the British Columbia publicity committee of the World's Grain Show, reports that a large district committee representing the community of Courtenay on Vancouver Island, is working successfully in securing exhibitors. These exhibits will cover a number of classes and will do credit, no doubt, to this district when the time for competition arrives.

In the north woods at Metagana, North Ontario, where M. U. Bates found his sample moose are unusually plentiful this spring. Mr. Bates was visiting one of the camps the other day and looking in a cabin found two infant moose asleep in one of the bunk beds. He lifted them out but they came back to the veranda and, finding a sunny spot, had another nap. The moose were quite tame and are here shown being posed for a photograph. The snapshots were taken within a mile of the Canadian Pacific Railway tracks near Metagana.

TEN YEARS' GROWTH OF TOURIST TRADE

The rise in the value of Canada's tourist trade during the last ten years has been little short of phenomenal. Estimates of the expenditures made in the Dominion by tourists from other countries run back as far as 1920, and it will be found that during this ten-year period, 1920-29, inclusive, tourists from abroad are estimated to have spent in Canada a total of roughly \$1,685,000,000.

Such a sum of money is almost staggering, and it is difficult to find comparisons enabling us to realize its immensity. Perhaps the most startling comparison that could be made is to place this sum alongside the enormous outlays that Canada has called upon to make in connection with the Great War. According to the Federal Public Accounts, the total expenditure made by the Dominion Government under the heading "War and Demobilization" is placed at roughly \$1,685,000,000.

Thus the expenditures made by tourists from other countries during this ten-year period, 1920-29, inclusive, are estimated to be equal to the total expenditures made by the Dominion Government under the heading "War and Demobilization" during the same period.

It is not to be wondered at that the highest financial authorities in Canada have recently made it a special point to direct public attention to the growth and possibilities of this comparatively youthful result to the ranks of the Dominion's major economic industries.

Bacon Contest

Summer Bacon Litter Competition To Be Held In Saskatchewan

The Saskatchewan Livestock Branch, with the co-operation of the Dominion Live Stock Branch, is fostering a summer bacon litter competition as a stimulus and a first rate benefit to the entire industry of Saskatchewan. According to J. C. Robertson, Live Stock Commissioner for Saskatchewan, the province will be divided into five districts for the purpose of this contest, over which the prize money will be equally distributed. Among the conditions of entry it may be noted that litters must be farrowed between April 1st and July 1st, and may be out of a grade or a purebred sow, but must be sired by a registered bacon type boar, and at least nine pigs must be raised to marketing age.

New Duty For Policemen

Police officers at New Bern, North Carolina, have added a new duty to their daily routine. A hurry-up call to three policemen to a home on the outskirts of the city. They found a father rather who informed them they were summoned to make the stubborn son take a dose of medicine. The boy took it.

The Arctic train nests 11,000 miles from where it spends its winters.

The simplest element known to man is the hydrogen atom.

The Courageous "Mounties"

Record Just As How High Old Time Adventure Is Lacking

The commander of the detachment of the Royal Canadian Mounted Police that is now in London for the International Horse Show felt called upon the other day to explain away a little misconception about this famous force that still exists in some quarters. The endeavor was made clear that the work of the Mounted Police nowadays is not, generally speaking, of the picturesque nature that it was a few decades ago. Gone in very considerable degree is the romance traditionally associated with this force. There are still the occasional "man hunt" through the wild and often thrilling episodes that an admiring world still likes to conjure up about the "Mounties," but the life of most members of this force, with the gradual extension of the frontiers of civilization in Canada, developed into a more or less humdrum affair. Little of what might be regarded as adventure is now experienced.

There need be no explaining away, however, of another traditional romance about the "Riders of the Plains." This the famed courage of the force, which is pronounced as ever, still ready to meet the sternest test. The crowd at the London Horse Show had an unforgettable personal experience in this proud staff of the force. Constable Cuthbert, engaged with "flying" Mounties in a Roman ride in the arena—a ride executed by men standing astride with their feet on different horses—slipped and fell, and although his horse severely injured him, he immediately remounted and carried the performance through to the end, amid applause of thousands. The injured constable fainted when the act was over.

The Canadian Mounted Police of the present day have the courage and chivalry of those men of the force who preceded them under more rigorous circumstances. The courage of the "Mounties" is a real and living thing, something that is still in the whole structure and record of this famous body of men. The incident reported from London was an illustration of that "get your man" code that has inspired its members to feats of unexcelled courage and sacrifice on the frontiers of their homeland over a period of more than half a century. — Regina (Evening) Leader-Post.

Recipes For This Week

(By Betty Barclay)

LEMON MARSHMALLOW COOKIES

- 1 cup shortening.
- 1/2 cup sugar.
- 2 eggs.
- 6 tablespoons lemon juice.
- Grated rind 1 lemon.
- 2 cups flour.
- 1 teaspoon baking powder.
- 1/2 teaspoon soda.
- 1/2 teaspoon salt.

Marshmallows. Cream shortening; add sugar and cream again. Beat in eggs; add lemon juice and rind. Fold in sifted dry ingredients. Roll out on slightly floured board and cut out. Bake in moderately hot oven (400 degrees) for 10 minutes; remove from oven, place half a marshmallow in the center of each and return to oven to brown.

CARLOTS AND CHEESE

Place twelve medium-sized carrots, Steam until tender. Put into a baking dish. Sprinkle liberally with cheese and a little salt and pepper. Beat three eggs and stir into a pint of milk that has been put on the stove to heat. Let the mixture thicken; then, pour over the carrots and bake for more cheese for 10 minutes. Put the baking dish in a pan of water and place in the oven to brown.

Suspects and Rabbits

The number of pelts received by the Hudson's Bay Company from year to year since about 1840, show marked periodic variation. According to an investigation made at the Dominion Observatory, Ottawa, the number of rabbit pelts was, on the average, three times greater one year before the minimum of suspects than at the maximum.

Need Musical Ear

The London hobbles have been taking music lessons. They are being trained to recognize the distinctive sounds of five horns which will be attached to King George's automobile.

Breman, Germany, was visited by 220,000 tourists last year.

Medical inspection of schools is just being put into force in Ireland.

Desert Will Become Garden

Young Engineers Raising River Jordan To Water Desert Land

A miracle is recorded in the Bible of the Jordan dividing at the word of the prophet. The miracle is being repeated now at the word of an engineer. Societies or athletes must believe what they can see.

Rutenberg, the engineer, is lifting the Jordan bodily and throwing it just where he wants it to fall, like the gods of fairy tales who lift up mountains and hurl them at the heads of his enemies. And in a few years the driest of countries will be electrified and the most dreary of deserts will become a green garden. On the left are the forbidding and barren hills of Transjordan. Poles are a rarity on the road to Jericho. After a few miles the sound is heard of a pick striding stone. There is a loud braying of donkeys and the puff puff of a small steam engine. And it is done. For miles around there is land rich in chemical fertilizer. The Dead Sea has been deepened and a narrow canal has been dug. There is no water and so the land is dead, deserted and desolate.

"If we raise the Jordan thirty feet we shall have the water to turn the desert into a paradise. It is quite simple. You see that concrete wall that goes down into the water. That is the first step. A little further along you will find another. It is believed that the engineer Rutenberg is doing this by watering the desert places is electricity."

A Romantic Province

Colorful Pages Of Pioneer History In West

The oldest of the Prairie provinces has had a romantic history. It gave birth to the romance of the West with its life of adventure. The history which colors the pages of pioneer history in the West. From what was a wilderness to a land of men. Winnipeg, is in itself a monument of a story replete with adventure and romance. The story of its beginnings ending in great accomplishments, with the torch lit by the first pioneers, the story of its great and prosperous province. July 15 will be a day of great pride to the people of Manitoba, that what has been done serving as an incentive to further achievement, with the spirit and zeal of the early pioneers carried on to meet the needs of the modern day.—Lethbridge Herald.

Wood Produced From Cotton

New Material Has Been Perfected By Man In England

Synthetic wood produced from compressed and hardened cotton material has been perfected by a Clerkenwell, England, man. It is said to be indistinguishable from mahogany, oak, or any other wood, and can be used in making furniture and all kinds of house fixtures. Its cost is much less than ordinary wood and its life will be as long, the inventor says. It may be moulded into any shape. It is expected to reduce the cost of houses as well as of furniture.

Manufacture Of Nylon

In the manufacture of each pound of rayon by the viscose process there are used one and a half pounds of wood pulp, two pounds of caustic soda, one and a fifth pounds of carbon disulphide and a half pounds of sulphuric acid.

The Central Railroad of Peru crosses the Andes at one point at 15,855 feet above sea level.

In Czechoslovakia there are fourteen women in Parliament, ten deputies and four senators.

"Were you driving for the first time?"

"No—the last."—Hummer, Hamburg.

CHAPTER XIX.

At the door went within, Charman's thoughts drifted back to that ride with Jim—so all the changes that had come since, and to those that were destined to come before many years. This man's confidence had stirred her deeply. He was younger than her grandmother, but he had lived a harder life and was breaking earlier. Probably he knew more about his condition than she had told her. The end might be nearer than it seemed; and his "putting his house in order." It was like him to be ready when he called home, and to plan so that his care for her welfare went even beyond the grave.

Charman's answer, not from cold, but from a sense of what life would be for her when all these natural changes had taken place. Even Grandma, happy as she was, could not go on for ever. What would there be for her in Wigbold without Jim? What would she do, even Jim? There was John Carter, to be sure. Perhaps . . .

The girl's lovely color deepened just as she thought of the change this reverse was leading. Then a child's fretful cry from within the house, and the sound of her mother's feet, broke her thoughts. The house seemed even shabbier than she remembered it—cold and bare, and the thought of the setting. A broken windowpane was stuffed with an old shawl. The shades at the windows were torn and sagging. What would she do, even without a kindly counselor like Doctor Howe? Would his successor be as lenient to her as the doctor had collected recently, as Jim Bennett had collected that interest for the bank?

No, Charman's heart answered, John Carter would not be an Indian creditor. There was a warm kindness about him, but he was a business man. He would not be a thought. But, spoke up a loyal voice within her, Jim was kind also. Only in business, but in his own men's care less about the human side of life. . . . Did days spent in thinking in terms of money blind one after a time to other needs? She stirred as the door of the cotterage opened and closed on her old friend; but she came to her side of the car and asked a question.

"Have you got Jim Bennett's address? He's in the big house, isn't he?"

"I can't remember it."

(To Be Continued.)

Fought At Waterloo

Widow To Obtain Pension Under British Ancestry Act
The widow of a man who fought at the Battle of Waterloo will be among those to obtain a pension under the British Ancestry Act. The pension is payable to the widow of a man who served in the British Army during the Napoleonic Wars. The pension is payable to the widow of a man who served in the British Army during the Napoleonic Wars. The pension is payable to the widow of a man who served in the British Army during the Napoleonic Wars.

The doctor paused, turning to look at Charman so intently that her color rose.

"There are photographs of two perfect peaches on his bureau, and according to Grandma, another in his pocket." The doctor's light.

"And what is there in his heart, my dear?" asked the old man.

"How should I know?"

"Well," said the doctor, shaking his head. "If a red-blooded, young fellow can live under the same roof with Charman Davis, and not get something in his heart, I am mistaken. He should have been on a book-keeping course."

Charman laughed as she responded: "I understand that they don't do it that way these days. And I've been told that a doctor's wife has a hard life."

"I think you could stand it," smiled her friend. "I shouldn't worry the lad to live alone, Charman, as he has. He's like a son to me."

She ventured a little laugh.

"I have that I regard him that way myself. It's a pleasure to keep his meals hot—he's so grateful."

"I'm a doctor, you regarded him differently, said the doctor, sighing. "That is, unless—Dear me! Here we are at his destination. The widow Bennett has got the grippe, I shan't be long, child."

The girl glanced up, suddenly conscious of her surroundings. "They had stopped before the small, brown, shabby cottage where Jim Bennett had once collected interest money—the place where Charman had called him 'Shylock'."

Mumma's for Janet Hilda.

Biggest Borrower

and Biggest Lender

Report Issued From Geneva Will Be Surprised To Many

It might be thought that Germany, with all her reparations needs, is the biggest borrower, and that the biggest lender in the world is the United States with all its gold.

Well, this isn't so on the per capita basis, at any rate, according to a report just issued by the League of Nations Economic Section, at Geneva. This volume, according to a New York Times dispatch, gives several widely accepted ideas the figures cover the year 1928, and the Times writer summarizes in part:

The country lending the most abroad per capita was not the United States, but The Netherlands, which was followed by France and the United Kingdom.

The country borrowing the most abroad per capita was not Germany, but Australia, which was followed by Germany, Argentina, Norway, and Hungary. Germany was greatest in the amount borrowed, her total being \$1,087,000,000; Australia was second, with a total of \$267,000,000.

The heaviest annual interest payments abroad per capita are not by Germany, the most heavily indebted of European nations paying only from \$2 to \$5 per capita, but by Australia, New Zealand, Canada, Argentina, and South Africa, the citizens of these sparsely settled countries paying from \$10 to \$30 each.

The greatest net receipt from interest and dividends was still recorded by the United Kingdom, with \$1,587,000,000 and \$888,000,000, respectively, in 1928.

The United States, far from being a laggard in her merchant marine, had the second greatest gross tonnage abroad from maritime freights in 1928, the figures being for the United Kingdom \$657,000,000; for the United States, \$339,000,000; and for Germany, \$29,000,000, with Norway, Italy, and Sweden following.

Canada profits more from tourists than the country whose name is generally synonymous with Switzerland. The nations receiving the most from foreign tourists are, in order, France, Italy, Canada, and Switzerland—Lithary Digest.

A Good Argument
Dinner—"Waiter, is this chicken soup?"

Waiter—"Yes, sir."

"Well, I can't find any chicken in it."

"Well, really, sir, you wouldn't expect to find a horse in horse-radish, would you?"

Know Where To Go
Recently a woman from Dallas, Texas, arrived in New York to visit a friend. I want to buy some cheap little trinkets to send back home for a joke, said the visitor. "Where is the Woolworth Building?"

WHOLE FAMILY

HAD DYSENTERY

Dysentery is one of the worst forms of bowel complaint and should be checked at once as its termination may be delayed.

Mrs. H. F. Stewart, Philadelphia, Pa., writes: "Two years ago we all very bad with attacks of dysentery. I was the worst. I was so bad that I was in bed for three or four days. I was completely relieved. Since then we have never without a bottle of it is the house."

On the market for the past 35 years; put up only by The T. Williams Co., Toronto, Ont.

May Judge Perth Cattle

Kenneth McGregor, Manitoba Receives Invitation From Scotland

Kenneth McGregor, son of the Lieutenant-Governor of Manitoba, and five of Amherstburg, and cousin of Malcolm McGregor, has been invited to act as a judge at the cattle show at Perth, Scotland, in February. This is the greatest Aberdeen-Angus annual event of its kind in Scotland and no Canadian has ever before been asked to act as judge. Mr. McGregor is a famous breeder of the Aberdeen-Angus cattle.

Little Help For This Week

"The Lord shall be unto thee an everlasting light."—Isaiah ix. 19.

There is no day as dark. Blessed through the murky some ray of hope may stand. Some blessed touch from Heaven that we might feel.

If we but choose to mark. —Celia Thaxter.

Let us all be sure that it is well, whatever comes, while we trust and stand fast and strive, and only hope— and rightly hope—when we want what we are in no wise willing to earn. The glory and the glow of life come by right living. So then, while we may not know what trials wait on any of us, we can believe that as the days in this job are filled with his dark malices are the only days that make him worth remembrance, and but for which his name had never been written in the book of Life; so the days through which we struggle, finding no way, but never losing the light, will be the most significant we are called to live.—Robert Collier.

STURDY CHILDHOOD

The sturdy child—the bright, active little man—is the one everybody loves. It is only the sickly, fretful child who is not attractive.

The birthright of every child to be sturdy and well-to-be is to make of his life an admirable one. Therefore, mothers, if you are not attractive to his friends, let him be. He must be strong and it is up to you to see that he gets right—this is given a medicine that will quickly make him well and keep him well.

Baby's Own Tablets are especially designed for infants, young children, for correcting the irregularities of the stomach and bowels—the cause of most of the ills from which the child suffers. The tablets are sold by medicine dealers or by mail at 25 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

New Metal Alloy

Combines Lightness of Aluminum With Hardness Of Steel

A new metal alloy which combines the lightness of aluminum with the hardness of steel has just been developed here by Johan Harden, a Stockholm engineer. The material can be rolled and forged and is impervious to all corroding acids.

In engineering and aviation circles in Sweden it is believed that the alloy will be of great benefit to aeroplane manufacturers, especially in hydroplanes, on account of its resistance to salt water.

Keep Douglas' Eucalyptus Liment handy. A sure, speedy remedy for colds, coughs, croup, and all other ailments. It is a powerful disinfectant, kills germs, cures, and is invaluable for inflammation and muscular rheumatism.

Preference For Blacks

A sheep slayer that attacks only the black sheep in the flock is reported to be in Cheyenne, Wyoming. The frank killer went through a flock and killed seven black sheep in one night, but failed to touch a single white one.

Make Your Windows Pay

Invest in WINDOLITE Windows and you will be repaid a hundredfold in the health of your Poultry and Live Stock

WINDOLITE

THE ORIGINAL GLASS SUBSTITUTE
MADE IN ENGLAND SINCE 1917 ON ORIGINAL PATENTS

This unbreakable glass substitute allows the full sunlight to enter, in light and flexible, easy to cut and fit, including the health-giving Ultra-Violet Rays, which do not penetrate ordinary glass.

USE WINDOLITE IN BROODER HOUSES LAYING PENS DAIRY BARN SUBROOMS ETC.

CUT DOWN YOUR LOSSES BY INSTALLING WINDOLITE

Canadian breeders of poultry and livestock are finding Windolite a most satisfactory and profitable investment. Young chickens and turkeys are entirely free from leg weakness and disease and will thrive in confinement under Windolite. Windolite comes in rolls any length, but 36 inches wide only.

CHAPTER XIII.—Continued.

The doctor chuckled, glanced sharply at his companion. "You said: 'It didn't imagine that those rides were a real sacrifice to my assistant.'"

"If they were," retorted Charman with a dimple, "he disguised the fact with proper gallantry; but I'm none the less grateful to him. It's a long walk to District Four when the mercury bores around zero, Doctor; and Grandma worries."

"I wish you didn't have to leave her, Charman. The days must seem long now that winter has set in."

"I feel they seem a great deal longer than she admits," replied the girl. "Grandma's so patient and uncomplaining. But I can't give up the school, Doctor, even with the well-earned board money coming in each week. I know we're foolish to cling to the old house the way we do, I might, in the name of common sense, be willing to part with it and break my heart, but I can't break Grandma's; and no other home would seem her own."

The old man was silent for a moment, and then said: "George K. tells me the house is really yours, Charman."

"Yes, I thought you knew that Grandma decided to let me a year ago. She got the idea that it might save trouble for me after she goes; and I'd let her do it because it made her happier."

They rode half a mile in friendly silence at last. "I feel like everything about you, child, always I know, you see, that I shan't always be on hand to advise you when you really need advice. An idea came to me in the night, an idea that might not suggest itself to you, and I'm telling you now so that if the time comes when you must part with the old homestead, you could consider it. It's this: If you sell the place, don't let your great-grandfather's little office. You could live there comfortably, you and Grandma. With a kitchen and bathroom added at the back it would make a cozy enough home; and it would be home, in a way, to both of us."

"I've been thinking," said the doctor, "I feel like everything about you, child, always I know, you see, that I shan't always be on hand to advise you when you really need advice. An idea came to me in the night, an idea that might not suggest itself to you, and I'm telling you now so that if the time comes when you must part with the old homestead, you could consider it. It's this: If you sell the place, don't let your great-grandfather's little office. You could live there comfortably, you and Grandma. With a kitchen and bathroom added at the back it would make a cozy enough home; and it would be home, in a way, to both of us."

"I've been thinking," said the doctor, "I feel like everything about you, child, always I know, you see, that I shan't always be on hand to advise you when you really need advice. An idea came to me in the night, an idea that might not suggest itself to you, and I'm telling you now so that if the time comes when you must part with the old homestead, you could consider it. It's this: If you sell the place, don't let your great-grandfather's little office. You could live there comfortably, you and Grandma. With a kitchen and bathroom added at the back it would make a cozy enough home; and it would be home, in a way, to both of us."

Interesting Local Items

Last Friday evening the Callies defeated the Legion by 2-0 in a league fixture.

Mrs. R. S. Hodge and Mrs. E. L. Stone left last Saturday for a few weeks visit with friends in Vancouver.

Mrs. M. and Mrs. W. Moran, of Lethbridge, spent last week in town visiting Mrs. Morans's parents Mr. and Mrs. P. Lavelle.

Miss Bessie Marsh, of Taber, is spending a few weeks in town visiting Miss Jean Paterson, of this town.

Reports of drought from all parts of this continent as well as from other grain growing countries boosted wheat prices here from 3 to 4 cents last Monday.

Mrs. H. McDonald of Bindloss, was rushed to Medicine Hat hospital by Airplane last Saturday to undergo an emergency operation. She was too ill to travel by car.

Mr. J. E. Tarrant received word last week end from his old home in Ireland informing him of the death of his mother. His many friends here extend to Mr. Tarrant their sincere sympathy in his sad bereavement.

A bad fire was narrowly averted last Sunday when Bert Allison and A. Paterson, motoring east of town, noticed a small patch of prairie ablaze along the crop of N. Dacre. By hard work they got the blaze under control before it entered the crop.

Mr. J. W. McArthur, who has been C. P. R. Superintendent at Medicine Hat for several years has been transferred to Regina to act in the same capacity at that point. Mr. McArthur has been a capable, courteous and painstaking official and his many friends on this division feel confident he has justly earned this promotion.

Here and There

(Continued)
Taking turns while the engine was under a full load of steam, Engineer H. J. Storey and Fireman A. Pullerton, dived the fire and entered the fire box of the engine to make running repairs. The engine displaced from the grate carrier on Canadian Pacific engine 170 at Hope, B.C., recently. They could stand the intense heat only a few minutes at a time but they succeeded in their work and saved several minutes of time. The railway's recognition of conspicuous merit.

Only three years ago May 24 last, the first transcontinental passenger train reached Vancouver over the Canadian Pacific Railway, leaving again next day. That was eleven months after the arrival of the first through passenger train at Port Moody, the railway's recognition of conspicuous merit.

Judging from present indications, there is every reason to believe that the tourist traffic from the United States and from other Canadian provinces to the Maritime will reach record proportions this season," says George B. Beer, recently appointed district passenger agent for the Canadian Pacific Railway at Saint John, N.B.

Three important appointments in the freight traffic department of the Canadian Pacific Railway have been announced by George Stephen, newly appointed vice-president in charge of traffic. They are—C. E. Jefferson, assistant freight traffic manager, Winnipeg, to be freight traffic manager, Montreal; H. W. Gillis, assistant freight traffic manager, eastern lines, to go to western lines in the same capacity; and Gerald Hiam, assistant general freight agent, Montreal, to be assistant freight traffic manager, eastern lines. The appointments were effective from June 1.

A ten day "all expense" tour of eastern Canada, covering 2200 miles, and including a visit to the Toronto Exhibition, world's greatest annual fair, will be conducted from the Maritimes by Professor H. L. Stewart, of Dalhousie University, next August. The tour which will take in most of the points and cities of interest in the territory will be over the lines of Canadian Pacific, Dominion Atlantic and Quebec Central Railways and by Canada Steamship Lines.

Empire Games at Hamilton

Hamilton, Ontario, will be the centre next month of the British Empire Games to which athletes from all the Dominions and the Mother Country will flock. E. W. Beatty, chairman and president, Canadian Pacific Railway, is chairman of the national committee of the A. A. U. of Canada for the Games, and promises of support have been received by the committee from Australia, New Zealand, Africa, British Crown

Colonies, the Irish Free State, Northern Ireland, while a strong and representative British committee has been formed to ensure full British participation at this notable sports gathering of the British peoples. Canada will, of course, be very fully represented, practically every province sending its outstanding athletes. The Games are scheduled to be held August 16-22.
